# S3 Series™

## Small Addressable Fire Alarm Control Panel

The Gamewell-FCI S3 Series™ Fire Alarm System is an easy-to-use, intelligent, fire alarm solution designed for small to mid-sized buildings. Analog technology delivers the benefits of a simple system installation, while a user-friendly touch-screen allows for quick, smart and intuitive panel operation and system maintenance.

Offering flexibility and expandability, the S3 Series system operates as a standalone system or as a network configured system, providing the perfect fire alarm solution for any small to mid-size application. As your facility grows, the S3 Series expands up to 122 panels through its networking ability. In addition, the S3 Series will communicate to our E3 Series® Emergency Evacuation System all on one pair of wires, when and if your facility requires additional mass notification protection, so it is the cost effective solution when it comes to installation.

### Advantages

- 4.3 inch Color touch-screen display
- 5 Programmable function buttons for quick and simple access to common service actions
- Supports System Sensor or Apollo sensors/modules
- Available in one loop – easily expands to two loops without replacing the complete system (252 maximum devices with Apollo, 636 maximum devices with System Sensor)
- Advanced networking capabilities – allows system expansion up to 122 nodes over twisted pair wire or fiber optics
- Communicates to E3 Series® system – for mass notification, voice evacuation capabilities
- Supports System Sensor Velociti® – Single or multi-criteria intelligent detectors
- Complete range of programming – from automatic configuration to CAM logic user selectable flexibility
- Hazard LED Indicator for Gas and Carbon Monoxide event
- Built in Ethernet Port for programming and FocalPoint® connectivity
- Retrofits into our legacy Gamewell 602/610 and FCI 7100 Series panels
- Automatically adjusts to any EOL value for legacy audible / visual appliances
- Removeable display for optional remote annunciation

### Intuitive Control – When it matters most

The front panel of the S3 Series offers a 4.3" color touch-screen for simple operation by facility managers and first responders. Much like consumer electronics

today, use of a touch-screen is preferred over a myriad of buttons and switches for convenience and intuitive control. Our color touch-screen displays system status, event details and service modes. On the front of the panel, six LEDs show Fire, Hazard (Gas or CO), Supervisory, Silenced, AC Power and Trouble conditions. Five (5) custom programmable switches allow the user quick access to common functions specific for the building like device disable, output bypass, and device status.
