Elpas - Providing Peace of Mind The Manor at Seneca Hill

Syracuse Time & Alarm Co., Inc. recently installed an **Elpas Resident Wandering system** at The Manor at Seneca Hill in Oswego, NY.

Upon admission, each wanderer is now given a state-of-the-art Elpas Positioning Tag that can be worn like a wrist watch. This allows the resident free movement within the allowed detection zones. Now, when a wanderer tries to leave an exit door or elevator, it will set off an alarm triggering existing maglocks to lock down. This prevents the resident from mistakenly wandering out of the building. The system will then generate a complete history report of the event. The staff now has an easier time locating the residents that are a threat to wander or leave the facility.

How Can This System Help YOUR Facility?

The **Elpas Resident Wandering system** is designed to reduce the costly need to

continuously supervise chronic wanderers or to restrict their mobile independence.

This system provides 24/7 real-time location tracking of patients that exhibit a high probability of elopement or wandering.

Elpas can be successfully tied into a facility's existing nurse call system and works with all major nurse call systems, including **Jerom** (which Syracuse Time & Alarm is the distributor for in much of NY State). Besides showing on the monitor at the nurse station the location of a door or elevator alarm, it can also register on the staff's pagers and/or phones. These peripheral devices that are used onsite to show all nurse call alerts from the resident rooms can now also help quickly identify a wandering resident that may have set off an exit alarm. Syracuse Time & Alarm has also used **Elpas Infant Protection systems** in area hospitals and it can also be used for asset tracking.
