Professional Audio/Visual Integrated Systems

Design, Engineering, Integration, Service and Support:

Syracuse Time & Alarm Co., Inc. has been designing and installing professional audio-video systems since 1992. We provide custom solutions for a variety of settings, from the small retail business to the large entertainment venue. Our clients include houses of worship, large and small entertainment venues, large corporations, small businesses, K-12 education, universities, retail environments, and government. Our system specialist provides the logistics for a multitude of solutions including:

- Custom sound systems
- Video production and projection systems
- Video conferencing
- Smart classrooms
- Boardroom AV systems
- Master antenna TV distribution
- Sound masking
- Low-voltage systems

We assemble and test most systems in our facility prior to installation. After the installation is complete we will provide hands-on training and printed documentation on the functionality of the system and offer maintenance contracts.

DID YOU KNOW?

Classroom Integrated Audio Systems and Integrated Classroom Communications have become a strong growth market. Some of the strategic solutions that we offer are:

- Improved audio benefits students and teachers
- Providing crystal-clear audio throughout the entire learning space
- Promoting classroom management
- Improving student performance and confidence
- Reducing teacher vocal strain and fatigue
- Safety alert system for education
- Delivering a silent alert for emergency situations
- Generating a network-wide alert that quickly notifies the proper authorities
- Providing customization options to accommodate school district policy
- Offering piece of mind for teachers and school administrators

SUCCESS!

2011 brought Syracuse Time & Alarm Co., Inc. some major installations but two projects stand out significantly.

Whitney Point Central School District's major renovation included a new stage production sound system with video interface. We also provided The Yamaha Active Field Control System (AFC). AFC employs Electro Acoustic Technologies that enables improved architectural acoustic characteristics that optimize reverberation with out the coloration of sounds. The kicker to this project is that a Factory Engineer was flown in from Japan to specifically tune the system!

We were put to the test of time at Cortland City School District. As the football season's playoff schedule came into full tilt, Syracuse Time & Alarm Co., Inc. provided wireless intercom systems for both offensive and defensive coaches along with wireless microphones and audio inputs which could interface with television production trucks on site! The high point to this installation was the "full music range" speakers that gave the outdoor facility auditorium quality sound.

Employee Spotlight

Alan DeMartino has logged 19+ years at Syracuse Time & Alarm Co., Inc. and has become one of the leaders in Audio/Visual integration technology. Alan comes from a consumer electronics background and has taken his self-employed entrepreneurship to a higher level. This level of expertise and logistical planning has been one of the successful secrets for our Company. Alan is an avid snow skier and pilots a kayak, when he can, to get away from it all.
