### GW-FCI's E3 Series® Combined Fire and MNS System

**FACT: Combined fire alarm and MNS offers cost savings!**

While the purpose of a fire alarm system is to evacuate the building safely in the event of a fire, a **Mass Notification System (MNS)** is designed to keep occupants informed of the type of emergency and direct them on what to do and where

to go. However, they share a common goal - to warn people of danger and provide information to stay safe.

When communicating to a broad population spread out over miles of a facility, conveying clear concise messages becomes a challenge. The **Gamewell-FCI E3 Series®** consolidates fire, security and mass notification with one life safety platform. Our fully integrated system offers three primary areas of communication to inform and direct people to take the appropriate response to an emergency situation.

## THE COMMONS ON ST. ANTHONY STREET Rising to the Challenge

**The Commons on Saint Anthony Street** (previously known as Mercy Health and Rehabilitation Center) is a new flagship location for **The Loretto Group**. This was a two year project that started in October of 2013. The main facility is a ten story structure which is home for 240 residents. In 2015, construction was completed on the new Rehabilitation Building, which added an additional 60 beds. The design concept of the project was to provide the residents a setting which replicates that of a high class hotel, and they hit the mark!

Syracuse Time & Alarm Co., Inc. was contracted by **The Hayner Hoyt Corporation** to provide the fire alarm and voice evacuation system to operate as a Mass Notification System for both buildings. We worked closely with them and the installing contractor, **O'Connell Electric, Inc.** Scheduling was very aggressive and tricky, but cooperation and communication being the key, the project was completed on time.

The system consists of two **Gamewell-FCI E3** panels that monitor all smoke, fire and CO detection and evacuation plus automatically and manually control the smoke purge systems. They are networked together with two separate **Local Operating Consoles (LOC's)**. There is one in each building. The LOC's allows the facility and first responders timely information and control of the system. These LOC's can page to both buildings simultaneously, or be able to provide floor by floor paging which is switch selectable at either location.

"Syracuse Time & Alarm - Professional, Dependable, Accurate - When STA is involved in your project, you have peace of mind knowing that everything will work the way it is supposed to. Their salespeople, technicians and all management personnel are all well versed in what they sell and provide. I am proud to announce to any owner that Syracuse Time and Alarm is the Fire Alarm Subcontractor on the Project". - *Jim Hagan/Hayner Hoyt Project Manager*
