Gamewell-FCI FFAST Detection System **The Earliest and Most Accurate Smoke Detection Available**

To keep your mission critical facility running 24/7, you need to be alerted to the faintest traces of smoke - the first indication of system trouble.

Gamewell-FCI FFAST's dual vision sensing technology system uses an infrared laser and a blue LED technology to detect extremely low concentrations of smoke, while maintaining a high level of immunity to non-smoke particulate. This enables a Very Early Warning type smoke detection.

With **FAAST**, there is NO DOWNTIME. Every second lost, every transaction missed, every bit of data destroyed can mean huge financial losses.

Hillbrook Juvenile Detention Center

Founded in 1974, **Hillbrook Juvenile Detention Center** is a division of the Onondaga County Department of Probation. It is a secure facility located on Onondaga Hill in Syracuse, NY. Hillbrook provides mandated secure services for youth ages 10 to 16.

Recently, **Syracuse Time & Alarm Co., Inc.** replaced the fire alarm system at the facility using the **Gamewell-FCI FFAST Aspiration Smoke Detection System**.

"We are very pleased with the Gamewell-FCI FFAST Detection System(s) installation and operation provided by Syracuse Time & Alarm Co. The existing system used for early warning fire detection in the cell areas had become very erratic in operation and expensive to maintain and operate." stated Kenneth Motyka, Facility Superintendent. "Your technician, Gareth Riggan, was professional, courteous and conscientious. The installation looks great and performs as we desire, detecting very low smoke levels (cigarette) in the cells and will call the main guard desk only. Separately, it will report a fire alarm condition when smoke levels reach more typical fire alarm alert levels. Thanks for a wonderful job!"
